**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-11 and 22-24, drawn to a transmitter chip, classified in class 342, subclass 442.
  - II. Claims 12-21, drawn to an antenna, classified in class 343, subclass 700MS.
2. The inventions are distinct, each from the other because of the following reasons: Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the claims of invention II recite limitations concerning arranging electrical components including antenna elements on different substrates and this arrangement of electrical components along with the types of electrical components may be patentable. The subcombination has separate utility such as being able to be used with other types of antenna and with other substrate configurations than those recited in the claims of the combination.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
